TECHNICAL EVENT

DATE:  
8<sup>TH</sup> AUGUST 2026, SATURDAY

TIME:  
2:00 PM

ORGANIZED BY:  
IEEE STUDENT BRANCH, LJ UNIVERSITY

## Conference Management Tool (CMT)

### 1. Overview

The Conference Management Tool (CMT) is a centralized system for managing all conferences conducted across the university. It handles past, current, and upcoming conferences, organized department-wise, and supports the complete conference workflow: publishing conference information and materials, receiving author registrations and paper submissions, verifying authors, tracking submission outcomes, and generating reports.

### 2. Scope of the System

- Manage conferences across their full lifecycle: past, current, and upcoming.
- Organize and display all conferences department-wise.
- Publish conference materials such as brochures and flyers.
- Support both paper presentations and poster presentations.
- Handle complete author registration and paper submission.
- Generate a unique Abstract ID for every submission.
- Collect the conference registration fee through an integrated payment gateway.
- Allow the administrator to search submissions and manage their status.
- Generate reports on all conference and submission data.

### 3. Conference Lifecycle Management

The system organizes conferences into three states, each presented in its own way:

| State            | Presentation                                | Description                                                                                |
|------------------|---------------------------------------------|--------------------------------------------------------------------------------------------|
| Past Conferences | Displayed under a navigation menu (archive) | Completed conferences, retained as records with their reports and materials for reference. |

|                      |                              |                                                                                       |
|----------------------|------------------------------|---------------------------------------------------------------------------------------|
| Current Conferences  | Featured on the home page    | The conference currently in progress, with its live schedule and updates.             |
| Upcoming Conferences | Displayed on dedicated pages | Future conferences open for registration, with dates, deadlines, and call for papers. |

#### 4. Department-wise Organization

All conferences are organized by department (for example CSE, ECE, Mechanical, Civil). Users can view and filter conferences by department, and each department's conferences are grouped together across all three states — past, current, and upcoming.

#### 5. Conference Materials

Each conference publishes its promotional and informational materials, which can be viewed and downloaded:

- Brochure — the detailed conference brochure.
- Flyer — the promotional flyer for the conference.
